

Jack be nimble,

Jack be quick,

Jack jumped over the
candle- oohh...

OW! I
burnt
my toe!

Yes, yes,
but how
did it
happen?

I know! I
know!

I believe that these things
I shall call neurons are in
you foot! They are made
up of pain receptors, a
nucleus, and axon, a
terminal, and synapse
where the chemicals are
released! The message is
then passed down
through many other
neurons up your leg
where this message turns
around at your spinal
chord! It then tells your
muscle to move! That's
why you snapped your
leg back like that!
AHA!

He's crazy.
